groundwater the majority of the region s smallholders are highly dependent on

seasonal dryland cropping making them extremely vulnerable to uncertain weather patterns and droughts improved irrigation capabilities through sustainable groundwater development could unleash smallholder farming and make it a major driver of economic growth poverty reduction climate resilience and improved food security so why is groundwater so underused tapping into groundwater requires a major shift in farming practices and it has its own challenges and requirements smallholder access to land and finance for irrigation infrastructure and equipment gendered and equitable adoption options this whole list is framed in terms of what the smallholder farmers need hence this should also be put in this context supply chains energy access resource availability and institutional support the chapters in this book present a picture that is not only heterogeneous across the region but also hold some common denominators they serve to enrich the discourse and help better understand the barriers along the pathways toward the sustainable and transformative adoption of groundwater irrigation the scientific information provided herein would be of interest to researchers practitioners decision makers and planners with interest in the region this book was originally published as a special issue of water international journal

small scale irrigation is expanding rapidly in parts of the world especially sub saharan africa offering smallholder farmers an opportunity to improve their livelihoods diets and resilience to climate change among other benefits growing research focuses on the potential for small scale irrigation to offer a pathway for women s empowerment yet the factors conditioning the relationship between small scale irrigation and women s empowerment are not well understood the evidence tends to be scattered across context specific case studies that focus on targeted outcomes without distinguishing between technology types scales or approaches to irrigation systems or technologies this paper synthesizes the issues related to gender and small scale irrigation using a conceptual framework that highlights the linkages between elements of women s empowerment and small scale irrigation because gendered dynamics with small scale irrigation play out differently depending on the scale of irrigation and the technologies used this paper applies the framework to examine case studies across a typology of small scale irrigation systems the case studies cover a range of farming and livelihood systems in which women s roles and gender relations vary highlighting the importance of the opportunity structure or context in which irrigation takes place this paper then draws lessons on the various ways in which small scale irrigation gender relations and women s empowerment interact and highlights areas where research gaps remain
